Things to do

- 2: Disturbingly, there's a bug in the TODOs. Why are they all numbered with '1'?
- 2: short paragraph introducing codon usage bias
- 2: 2–3 sentences on our proposal
- 2: 1 sentence per hypothesis
- 2: Do we need to do this?
- 2: Statement, qualifications for each
- 2: Do we need to do this?

Background

Proposal

We intend to identify causal relationships of codon usage bias and point mutations on protein structure.

Aim 1: Develop a comprehensive pipeline to elucidate relationships between codon usage bias and protein structure.

Aim 2: Identify clinically significant effects of synonymous mutations on protein structure.

Aim 3: Establish codon usage bias as an important biological mechanism.
